

Stormwater Projects for Central Forest Park/Concerned Citizens of Forest Park (ER 4059/E27)

The Baltimore City Department of Public Works (DPW) is required to install Best Management Practices (BMPs) that reduce and treat stormwater entering its waterways per its federal Municipal Separate Storm Sewer System (MS4) Permit. Central Forest Park/Concerned Citizens of Forest Park one of the areas identified in the City's Watershed Implementation Plan for installing BMPs.

What are Best Management Practices?

These are often called rain gardens, swales and micro-bioretention facilities. They are planted areas that collect stormwater runoff from the adjacent paved street and allow the water to filtrate through the facility before flowing to a storm drain. With these facilities filtrating the rain water runoff, it will reduce the pollutants entering the nearby watersheds. Here is a picture of a BMP curb bumpout that is currently in design for your area.

Stormwater Bumpout facility at Bush Street

What is proposed for Central Forest Park/Concerned Citizens of Forest Park ?

DPW is proposing up to 1 storm water bumpout in this area identified on the map to the right. The BMP facilities is currently in design and are to aid the City of Baltimore in fulfilling its MS4 Permit requirements.

When will they be installed?

The construction of this project is on hold. The project schedule for construction will be posted when it is available.

Comments/Questions?

Please contact the City Project Manager Mr. Jalil Abdul with any question you may have via email at jalil.abdul@baltimorecity.gov and/or office at (410)- 396-3440.
